## Setting the scene: Terras de Trás-os-Montes

- Area: 5544 km<sup>2</sup>
- Population: 107 272 (2021)
- Pop. density: 19.35 / km<sup>2</sup>
  
- Mountain landscape with rich culture
- 2 climate zones
- 4 Natural Parks (1 Protected Landscape)
- Fully included in UNESCO biosphere
  
- Population decline since 1960s: ~ -50%
- Agricultural land abandonment since 1960s: ~ 50 000 ha

# What happens *after* agricultural land is abandoned?

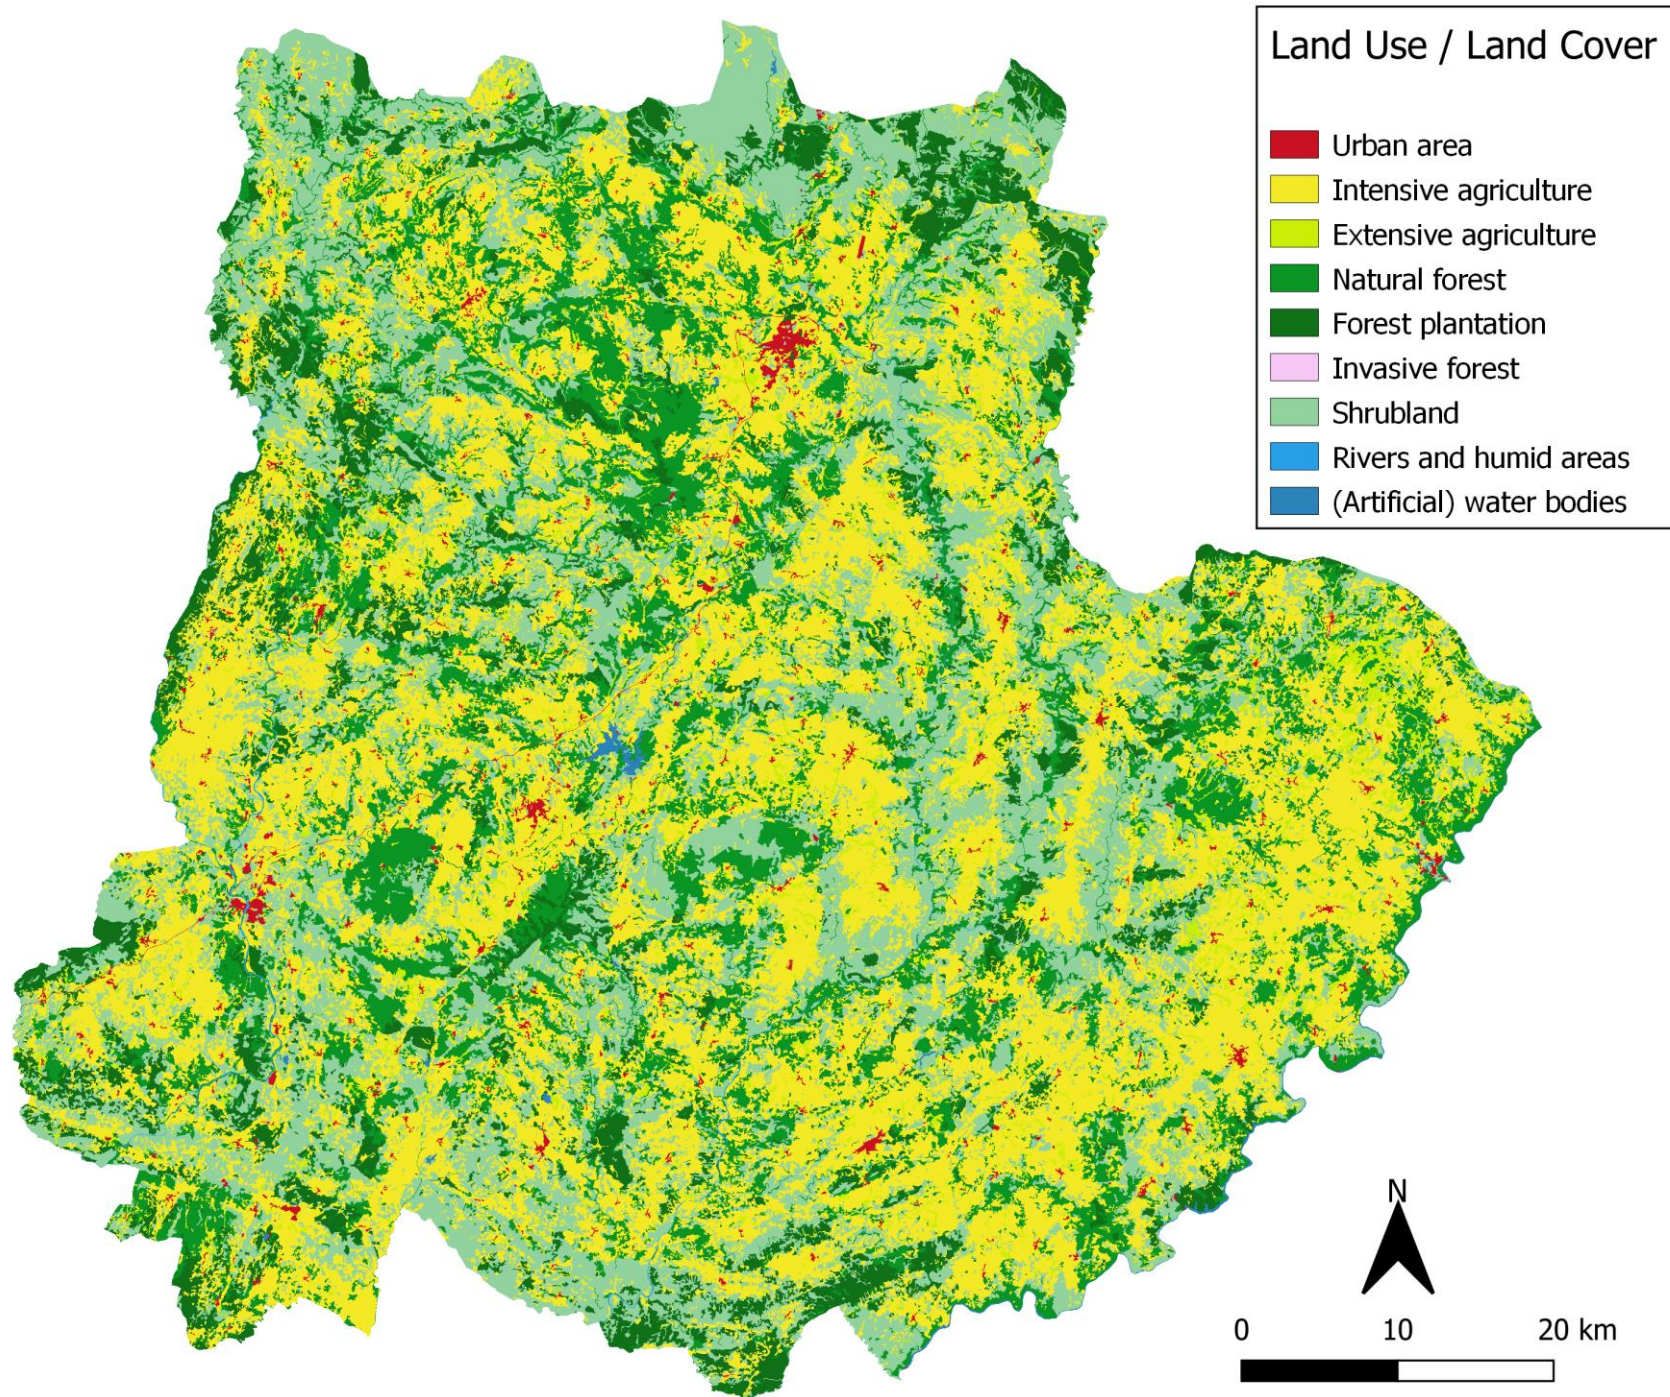

## Abandonment is not an end-state

“post-agricultural abandonment trajectories [are] the changes in land cover and land use observed after the cessation of agriculture activities.” (Fayet et al., 2022)

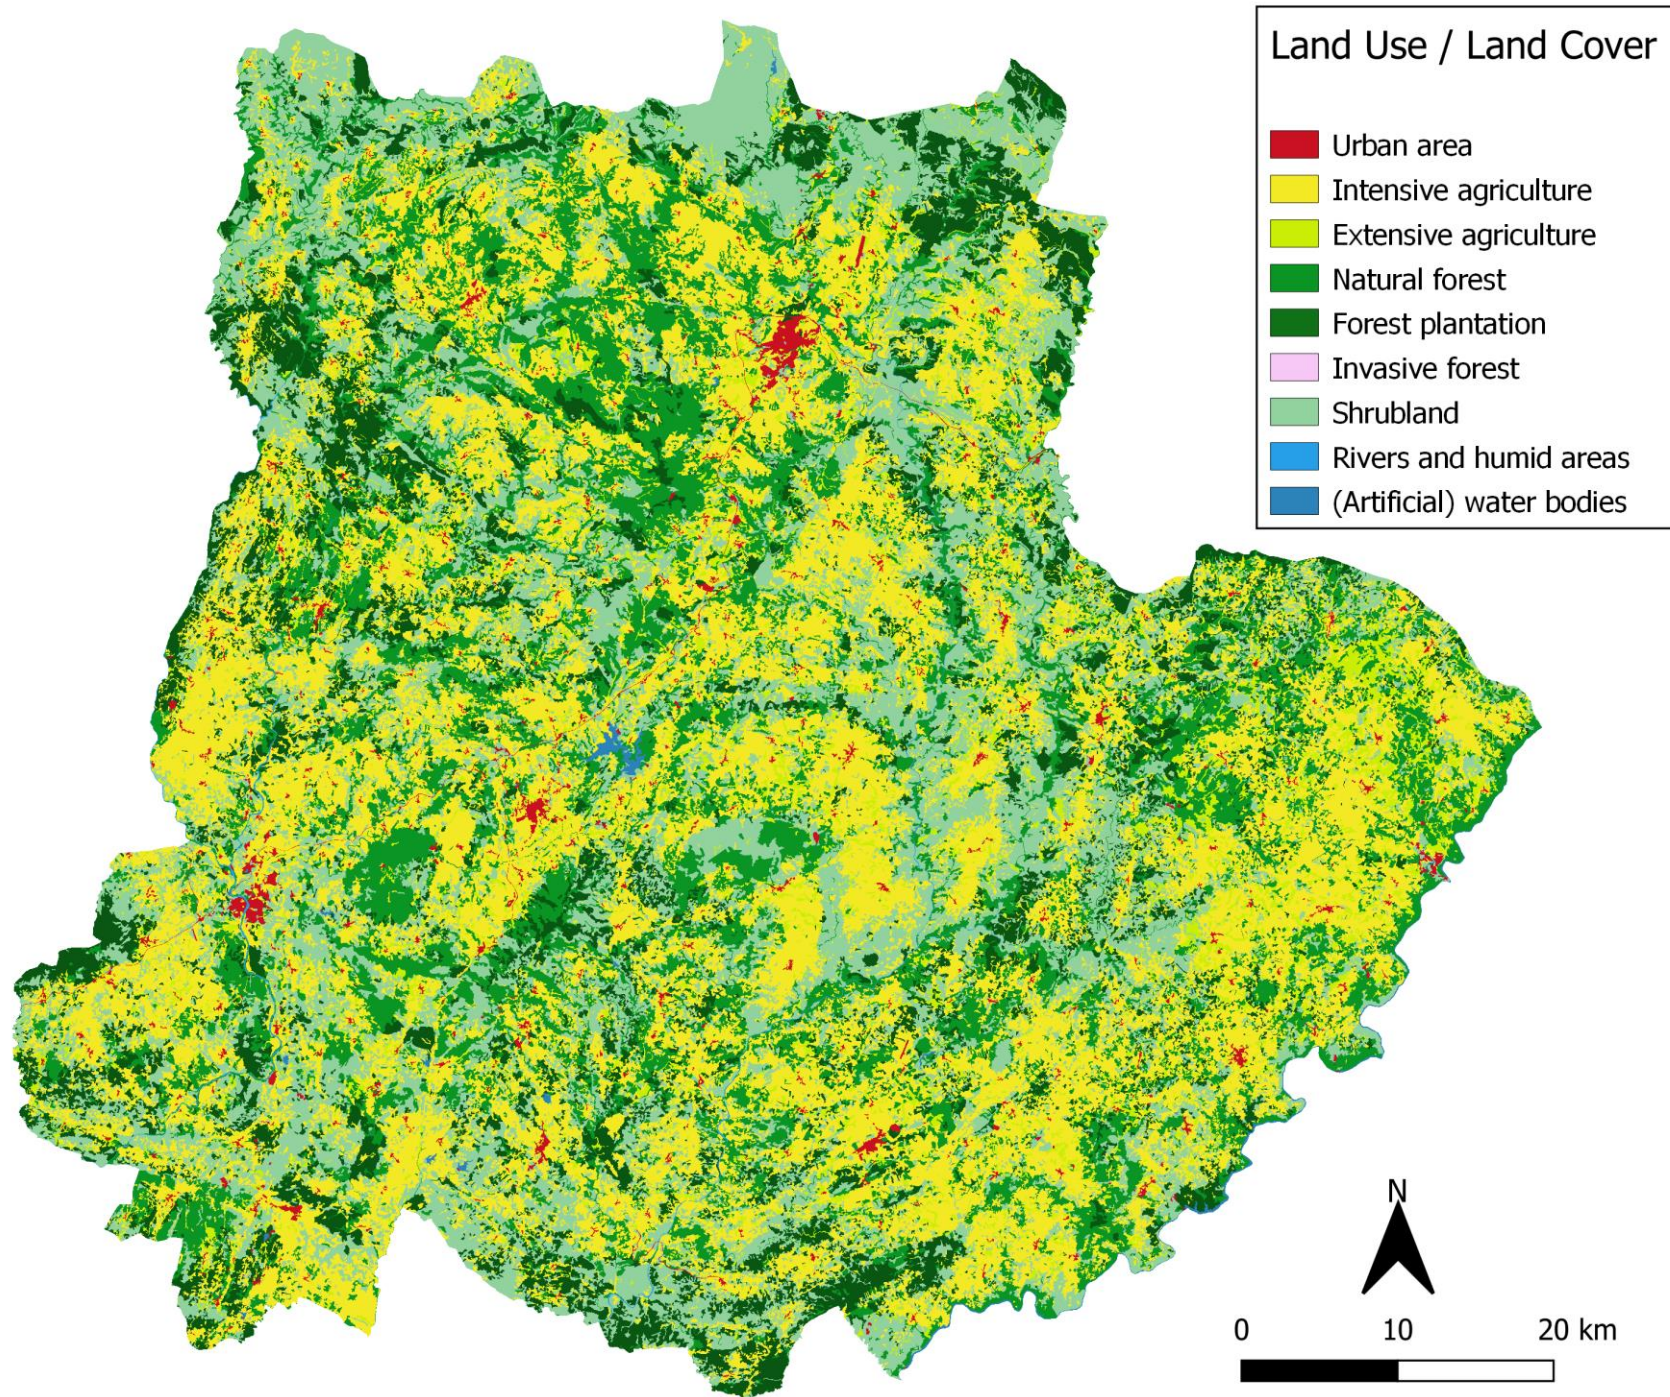

- Landscapes continue to change.
- Land uses and associated values also continue to change.
- Changes can happen in various directions simultaneously.

# Transition matrix → Post-abandonment trajectories

		Land use (t+1)					
LULC category		Urbanised	Intensive agriculture	Extensive agriculture	Forest (natural)	Shrubland	Plantation (forestry)
Land use (t)	Urbanised	<i>No change</i>	<i>Unlikely</i>	<i>Unlikely</i>	<i>Unlikely</i>	<i>Unlikely</i>	<i>Unlikely</i>
	Intensive agriculture	Urbanisation	<i>No change</i>	Extensification	Natural succession	Natural succession	Afforestation
	Extensive agriculture	Urbanisation	Intensification	<i>No change</i>	Natural succession	Natural succession	Afforestation
	Forest (natural)	Urbanisation	<u>(Re-)cultivation</u>	<u>(Re-)cultivation</u>	<i>No change</i>	Natural succession	Afforestation
	Plantation (forestry)	Urbanisation	<u>(Re-)cultivation</u>	<u>(Re-)cultivation</u>	Natural succession	Natural succession	<i>No change</i>
	Shrubland	Urbanisation	<u>(Re-)cultivation</u>	<u>(Re-)cultivation</u>	Natural succession	<i>No change</i>	Afforestation
Direction of change (Fayet, 2022b)		<b>Urbanisation</b>	<b>Return to agriculture</b>		<b>Spontaneous revegetation</b>		<b>Managed revegetation</b>

# Change trajectories at parish scale: 1995 – 2007 – 2018

### Return to agriculture

### Managed revegetation

### Spontaneous revegetation

### Urbanisation

- Spontaneous Revegetation is the most widespread trajectory
  - Extensive areas on Managed Revegetation trajectory
  - Return to agriculture trajectories emerge in SW
- 
- Return to agriculture trajectories gain dominance
  - Revegetation trajectories reduce to minimum
  - Urbanisation trajectories determined by road infrastructure development

## Who brought the ongoing abandonment to a halt?

- Population growth rate

1991-2001	2001-2011	2011-2021
-4.04	-7.54	-8.68

- Mean farmer age

1989	1999	2009	2019
58	59	63	66

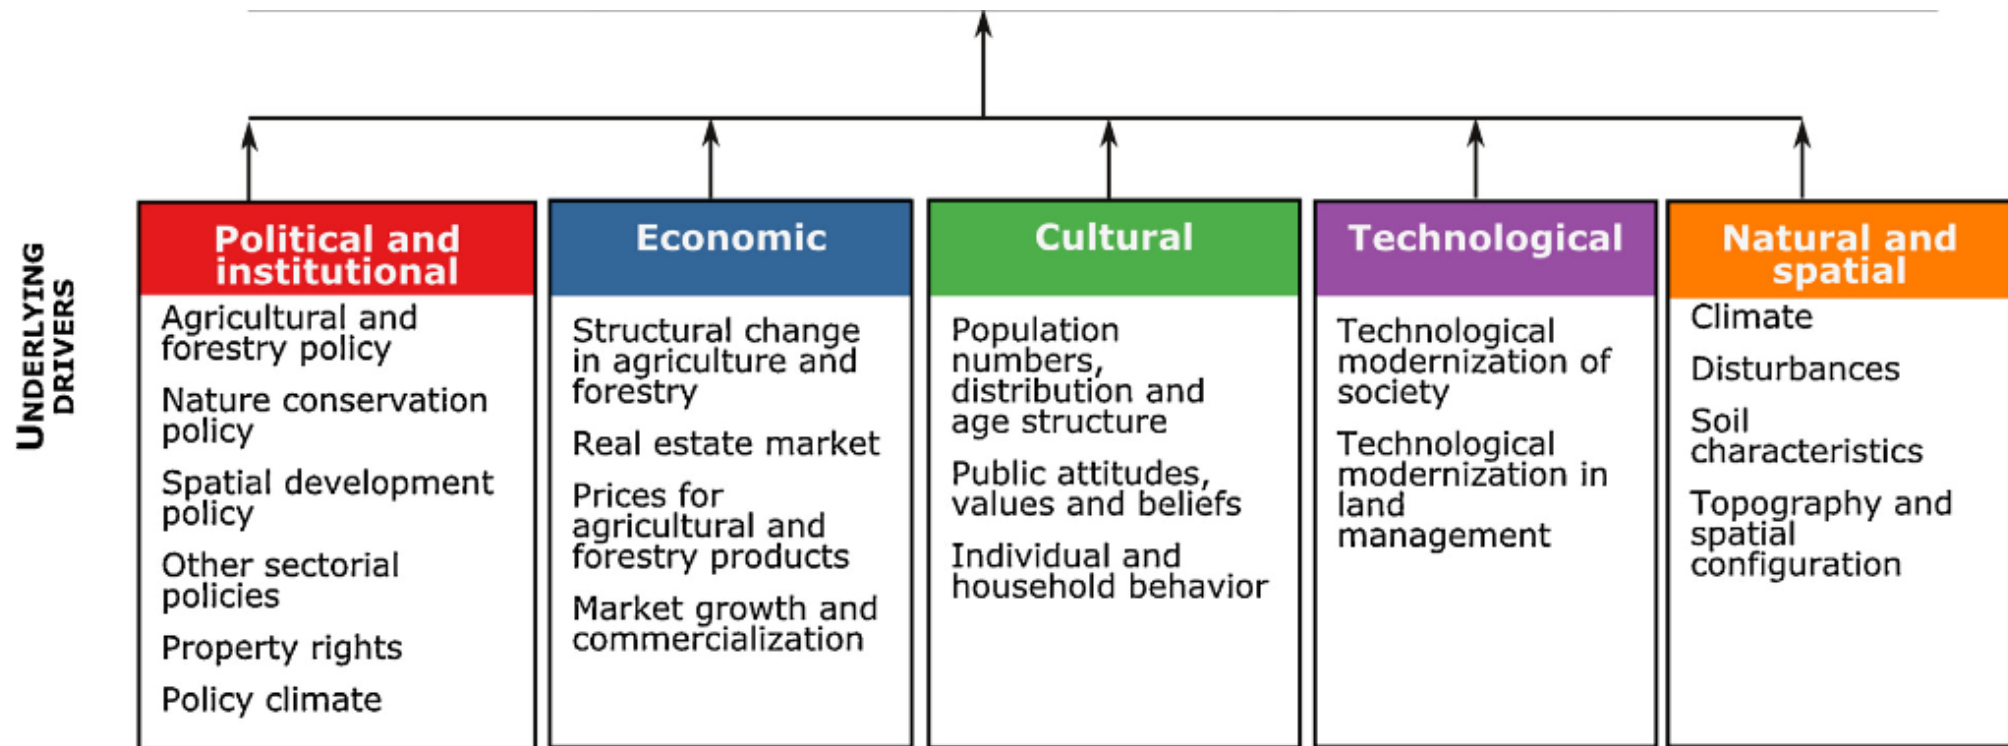

- Mean farm size (ha)

1989	1999	2009	2019
10.04	9.71	8.78	8.62
